PRIMARY CATALYST — THE REASON IT MOVES NOW

NCLT approval of the demerger of GVPIL's Durgapur boiler unit into JSW Energy — BSE/NSE cleared the scheme on 01 Apr 2026 and GVPIL holders get 10 JSW Energy shares per 139 held, crystallising once the Tribunal sanctions it.

CATEGORY	QUANTIFIED IMPACT	PROBABILITY	WINDOW
Restructuring — Demerger / value-unlock	Hives off asset-heavy Durgapur → asset-light core-services GVPIL + a 10:139 JSW Energy share entitlement on top	M — exchange NOC done; NCLT + creditor/shareholder nods still pending	File NCLT by 01 Oct 2026; completion ≤12 mo from 31 Mar 2026

Priced in? Substantially — +239% YoY / +141% in 6 mo to a 52W high already embeds the value-unlock optionality, the core-services pivot and the dividend return. NOT priced: NCLT timing slippage and post-demerger steady-state margins. · Source: BSE/NSE observation letters 01 Apr 2026; JSW Energy board 18 Sep 2025

BULL
₹950-1,000 (+11-16%)
NCLT clears cleanly, JSW entitlement crystallises, core-services orders sustain +30%.

BASE
₹820-880 (±flat)
NCLT grinds through CY26 as guided; stock consolidates the post-rally range.

BEAR
₹720-760 (-12-16%)
NCLT delay/objection + FGD pipeline dry-up + a lumpy-quarter miss.

> *A re-rated, near-debt-free power-EPC turnaround whose entire move discounts a value-unlock (Durgapur → JSW Energy) that completes months out. In a 1–4 week swing window there is no fresh binary, the chart sits at a 52W high on ~10x book, and the FGD order engine is structurally shrinking — so the edge is to wait for a pullback, not chase.*

WHAT THE STREET IS PRICING IN

Formal sell-side coverage is **thin** for a ₹5.8k Cr small-cap — the re-rating is largely retail/event-driven, so published consensus targets are sparse (**N/A**). IN the price: the Durgapur→JSW value-unlock, the core-services pivot, and the return to dividend. NOT in the price: NCLT timing risk, replacement of the shrinking FGD pipeline, and whether the 11% EBITDA floor holds post-demerger. FY26 PAT ₹253 Cr → 16.5x TTM looks optically cheap, but rests on lumpy contract accounting (Q4 PAT −31% YoY) and a 77% ROE on a thin equity base.

RISKS TO WATCH

AVOID

Quality turnaround and a genuine value-unlock, but the catalyst completes well beyond a 1–4 wk swing while the chart sits at a 52W high on ~10x book and the FGD order engine is structurally shrinking — swing R:R from here is poor; wait for a pullback into ₹780–810. **Flips the call:** an NCLT filing/approval headline, or a clean volume breakout above ₹898, turns this into a TACTICAL LONG.
