

Bliss GVS Pharma Ltd

NSE: BLISSGVS | BSE: 506197 | Market Cap: Rs. 4,644 Cr

Initiating Coverage | 14 Jun 2026

CMP	RATING	12M TARGET	UPSIDE	52W HIGH / LOW	PROMOTER HOLD.
Rs. 438	BUY	Rs. 530	21%	Rs. 463 / 118	35.4%

One-Line Thesis: Bliss GVS Pharma is a niche Africa-export pharma play undergoing a control change (Anupam Rasayan open offer at Rs. 299) while delivering its strongest earnings in a decade (FY26A PAT +50% YoY to Rs. 135 Cr); post-acquisition synergies across the KSM-to-finished-formulation value chain and WHO-GMP-certified capacity support a re-rating toward Rs. 530 over 12 months.

COMPANY SNAPSHOT		KEY METRICS (FY26A)	
Sector	Pharmaceuticals	Market Cap	Rs. 4,644 Cr
Industry	Pharma — Exports / Specialty	Stock P/E	35.5x
Exchange	NSE / BSE	Book Value	Rs. 113
Face Value	Rs. 1	P/BV	3.9x
52W High	Rs. 463	ROCE (FY26A)	17%
52W Low	Rs. 118	ROE (FY26A)	12%

This report is for informational purposes only and does not constitute financial advice or a solicitation to buy or sell securities. Investors should conduct their own due diligence. All financial data sourced from screener.in (fetched 14-Jun-2026). Estimates are analyst projections and may differ from actual outcomes.

Section 2: Investment Thesis

Three Reasons to Own BLISSGVS

- **Acquisition-driven re-rating catalyst:** Anupam Rasayan India (a specialty chemical manufacturer) announced a May-2026 SPA to acquire 43.3% of Bliss GVS at Rs. 299/share, triggering a mandatory open offer for 26% more at Rs. 299 (open Jul 16 - Jul 29, 2026). The acquirer's stated rationale is building a full KSM-to-finished-formulation value chain. While the open offer price (Rs. 299) is well below CMP (Rs. 438), the strategic premium implies the acquirer values long-term synergies, not just the acquisition price. Post-completion, vertical integration could structurally compress COGS and improve OPM toward 22-24%.
- **Strongest earnings in a decade:** FY26A PAT of Rs. 135 Cr represents 50% YoY growth, driven by Africa contract wins, WHO-GMP recertification of the Palghar facility (June 2026), and steep debt reduction (borrowings fell from Rs. 102 Cr in FY23 to Rs. 22 Cr in FY26 — near debt-free). The balance sheet is the cleanest it has been in 10 years, supporting higher capital allocation to growth.
- **Africa franchise with structural tailwinds:** Bliss GVS derives the majority of revenue from Sub-Saharan Africa, exporting to 60+ countries. Its Kenya subsidiary (Bliss GVS Healthcare) won a 3-year USD 111 Mn healthcare contract with Aon Kenya. Combined with 62+ molecules in the pipeline and US FDA approval for the Palghar suppository unit, the company has regulatory depth that smaller Africa exporters lack.

Near-Term Catalyst

- Open offer closure (July 29, 2026): Post-offer, Anupam Rasayan will own ~70% of Bliss GVS. Management continuity (the Arora family retains operational roles initially) means near-term disruption risk is low. Expect integration synergy announcements in Q2FY27 concall (October 2026).

Biggest Risk

- High debtor days (204 days in FY26) remain structurally elevated due to the African government/tender client base. Working capital intensity (CCC 244 days) constrains free cash flow generation. Any delay in African tender payments or currency devaluation (Nigerian Naira, Kenyan Shilling) could pressure FY27E earnings materially.

Section 3: Business Overview

Company Background

- Incorporated 1984; headquartered in Mumbai. Listed on NSE (BLISSGVS) and BSE (506197). Promoter family: Arora group. Shares outstanding ~10.6 Cr (FV Rs. 1).
- Core business: manufacturing and export of pharmaceutical formulations in suppository, pessary, soft gelatin capsule, tablet, and syrup forms. Suppositories and pessaries are a niche dosage form with high barriers to entry (specialized equipment, WHO-GMP compliance required).

Product Portfolio

- Over 150 branded formulations across 60+ therapeutic segments: anti-malarial (P-Alaxin, Lonart), anti-fungal (Funbact-A), anti-bacterial, anti-inflammatory (Lofnac), contraceptive, anti-diabetic.
- 62+ molecules in pipeline; 48+ targeting regulated markets (US, EU). US FDA approval received for Palghar suppository unit — critical for US market entry strategy.
- EU-GMP certification held; WHO-GMP compliance for Palghar facility reconfirmed June 2026.

Geographic Footprint

- Exports to 60+ countries, with Sub-Saharan Africa as the dominant revenue contributor (estimated 60-65% of consolidated revenue based on Africa concentration data from screener.in insights).
- Kenya step-down subsidiary (Bliss GVS Healthcare) won a 3-year USD 111 Mn managed-healthcare contract — signaling capability beyond pure pharma into healthcare services delivery.
- Strategic tie-ups in USA and Canada for regulated-market generic penetration.

Manufacturing Infrastructure

- Primary manufacturing at Palghar, Maharashtra. Dedicated suppository/pessary capacity (Unit 2 and 3) and tablet capacity (Palghar Unit 1).
- Fixed assets expanded from Rs. 234 Cr (FY15) to Rs. 459 Cr (FY26) reflecting sustained capex; FY27-28E capex estimated at Rs. 60-70 Cr to expand suppository capacity.

Ownership Structure (Mar-2026)

- Promoters: 35.4% (Arora family; stable with marginal accretion each quarter)
- FIIs: 10.5% (declining from 16.5% in Jun-2023 — pre-offer overhang selling)
- DIIs: 5.0% (stable)
- Public / Retail: 49.2% (elevated; open offer absorbs 26% from public)
- Pledge: No pledge data flagged on screener.in for promoter shares

Section 4: Industry & Competitive Landscape

Industry Overview

- Indian pharma export market: USD ~28 Bn annually (FY25); Africa accounts for ~USD 3 Bn+, driven by government tender/bulk procurement channels across 54 countries.
- Suppository and specialty dosage forms: Niche segment with limited domestic players. Key competitive advantages = WHO-GMP / US FDA approval, molecule breadth, logistics infrastructure.
- Structural tailwind: African Union and WHO push for local/regional medicine procurement, benefiting compliant exporters like Bliss GVS over non-certified Chinese competition.
- India pharma sector trades at 25-40x PE; export-focused mid-caps (sub-Rs. 10,000 Cr MCap) typically trade at 22-32x trailing PE. BLISSGVS at 35.5x trailing PE reflects acquisition premium.

Peer Comparison (as of 14-Jun-2026, sourced from screener.in)

Company	MCap (Cr)	CMP (Rs.)	P/E	P/BV	OPM%	ROCE %	ROE%	Rev FY26 (Cr)	PAT FY26 (Cr)
Bliss GVS (BLISSGVS)	4,644	438	35.5	3.9	18%	17%	12%	927	135
Marksans Pharma	11,436	252	27.4	3.8	20%	19%	15%	2,951	420
Granules India	18,992	766	31.5	3.7	22%	16%	14%	5,366	595
Gland Pharma	37,317	2,262	28.3	3.4	37%	17%	13%	4,552	1,300
Ajanta Pharma	39,117	3,131	37.0	8.6	26%	32%	25%	5,453	1,056

- Bliss GVS trades at a premium P/E (35.5x) vs. Marksans (27.4x) and Granules (31.5x) primarily due to the open-offer-driven stock run-up from Rs. 118 (52W low). On a P/BV basis (3.9x), it is broadly in-line with Marksans/Granules.
- ROCE of 17% (FY26A) is a sharp improvement from 12% in FY24/25, reflecting the PAT jump and debt reduction — converging toward Gland Pharma's 17% and Ajanta's 32% upper-end benchmark.
- Ajanta Pharma (highest ROCE 32%, ROE 25%) serves as the aspirational peer — both Africa-focused with branded generics; Bliss GVS' operational gap to Ajanta represents the re-rating runway.

Section 5: Management Quality & Capital Allocation

Track Record

- Arora family has run Bliss GVS since 1984 — a 40-year track record in specialty exports. Revenue grew from Rs. 407 Cr (FY15) to Rs. 927 Cr (FY26) — a 7.8% CAGR, modest but consistent.
- Company navigated COVID disruption (FY21 revenue dipped to Rs. 577 Cr from Rs. 899 Cr in FY19) and recovered fully by FY23, demonstrating resilience in African markets.
- FY22 was a poor year (PAT Rs. 23 Cr, tax rate 57%) — one-off provisions distorted that year. Management communication on FY22 anomaly was limited, a minor governance concern.

Capital Allocation

- Debt reduction: Borrowings reduced from Rs. 225 Cr (FY17 peak) to Rs. 22 Cr (FY26) — a disciplined de-leveraging despite capex investment in Palghar. Signals conservative financial management.
- Dividend: Consistent payouts (6-8% payout ratio) — adequate but not generous. Yield of 0.11% is negligible at current prices.
- Capex: Rs. 75 Cr (FY25), Rs. 38 Cr (FY26). Stepped-down in FY26 — likely capacity-adequate phase before the Anupam acquisition's integration capex cycle begins.
- ESOP issuance: 267,250 shares allotted June 11, 2026 — minor dilution; signals management retention through acquisition period.

Post-Acquisition Governance

- Anupam Rasayan (acquirer) is itself a listed specialty chemicals company — professionally managed, SEBI-compliant listed entity. Board reconstitution post-acquisition expected to bring chemical/pharma integration expertise. Risk: Anupam is primarily a B2B chemicals business with limited consumer/export pharma track record — operational execution post-integration is key uncertainty.

Section 6: Financial Deep-Dive

P&L; Summary (Rs. Cr — Consolidated, screener.in fetched 14-Jun-2026)

Metric	FY23A	FY24A	FY25A	FY26A	FY27E	FY28E
Sales (Rs. Cr)	752	770	810	927	1,050	1,175
EBITDA (Rs. Cr)	117	151	127	164	189	218
OPM %	16%	20%	16%	18%	18%	19%
Other Income (Rs. Cr)	18	-0	36	71	20	22
Interest (Rs. Cr)	10	7	8	12	6	4
D&A; (Rs. Cr)	19	26	29	33	37	41
PBT (Rs. Cr)	106	117	126	190	166	195
Tax %	28%	30%	28%	29%	28%	28%
PAT (Rs. Cr)	77	82	90	135	120	140
EPS (Rs.)	6.80	7.21	8.00	12.21	10.85	12.66

- Revenue CAGR FY23-FY26A: 7.2% — below-trend, largely volume-driven in Africa markets. FY27E assumes 13% growth driven by Kenya contract (USD 111 Mn / ~Rs. 925 Cr over 3 years), new US generic launches, and suppository capacity expansion.
- OPM was compressed at 16% in FY25 (vs. 20% in FY24) due to freight cost inflation and African forex headwinds. FY26A recovery to 18% reflects stabilising logistics + a Rs. 71 Cr other income boost (Kenya healthcare contract milestone income). FY27E other income normalises to Rs. 20 Cr — hence PAT likely to decline modestly to Rs. 120 Cr in FY27E.
- EPS FY26A at Rs. 12.21 is the highest in the company's listed history. FY27E EPS expected at Rs. 10.85 on normalised other income, before recovering to Rs. 12.66 in FY28E on operating leverage from expanded Kenya revenues.

Balance Sheet Summary (Rs. Cr)

Metric	FY23A	FY24A	FY25A	FY26A	FY27E	FY28E
Equity Capital (Rs. Cr)	10	10	11	11	11	11
Reserves (Rs. Cr)	873	957	1,040	1,182	1,272	1,375
Borrowings (Rs. Cr)	102	100	88	22	22	15
Fixed Assets (Rs. Cr)	379	370	406	459	490	520
Total Assets (Rs. Cr)	1,157	1,212	1,301	1,492	1,580	1,700
D/E Ratio	0.12x	0.10x	0.08x	0.02x	0.02x	0.01x

- Balance sheet is the key positive surprise of FY26: borrowings collapsed to Rs. 22 Cr (from Rs. 102 Cr in FY23) — effectively debt-free. D/E of 0.02x at FY26A end vs. 0.12x in FY23. This de-leveraging frees Rs. 6-8 Cr of annual interest, improving PAT conversion.
- Working capital remains structurally high: debtor days at 204 (Africa government clients pay slowly). Inventory at 129 days (up from 111 in FY25). CCC of 244 days means the company funds ~8 months of sales in working capital — a persistent FCF drag.

Cash Flow Summary (Rs. Cr)

Metric	FY23A	FY24A	FY25A	FY26A	FY27E	FY28E
CFO (Rs. Cr)	34	103	106	139	130	150
CFI (Rs. Cr)	-6	-83	-75	-38	-60	-55
CFF (Rs. Cr)	-25	-21	-30	-89	-30	-25

FCF (Rs. Cr)	-59	75	33	85	70	95
CFO/EBITDA	29%	68%	83%	85%	69%	69%

- CFO/EBITDA conversion improved sharply to 85% in FY26A (from 29% in FY23) — quality improvement. FCF turned strongly positive (Rs. 85 Cr in FY26A) despite elevated inventory build-up.
- CFF of negative Rs. 89 Cr in FY26A reflects both debt repayment and normal dividend outflow — a healthy use of cash generation. Net cash position improved meaningfully.

Returns & Efficiency Ratios

Metric	FY23A	FY24A	FY25A	FY26A	FY27E	FY28E
ROCE %	12%	14%	12%	17%	15%	16%
ROE %	9%	9%	9%	12%	10%	11%
Debtor Days	187	192	198	204	200	195
Inventory Days	94	113	111	129	125	120
CCC (Days)	202	247	246	244	240	230

- ROCE trajectory: 12% (FY23/25) -> 17% (FY26A). The jump is partly PAT-driven (normalised to Rs. 120 Cr in FY27E), hence FY27E ROCE steps back to ~15%. Medium-term target: 18-20% ROCE as Africa franchise matures.
- Debtor days (204 days) remain the single biggest structural drag on ROE. A 30-day reduction in debtor days would release ~Rs. 75 Cr of working capital and meaningfully improve FCF. This is a key lever for Anupam post-acquisition.

Section 7: Earnings Quality Checklist

Quality Metric	Assessment	Grade
CFO / EBITDA conversion (FY26A)	85% — strong; exceptional vs. 29% in FY23	A
Recurring vs. non-recurring income	Rs. 71 Cr Other Income in FY26A is material (53% of EBIT); includes Kenya contract revenue and FX gains — partially one-time	B-
Debtor quality	204 debtor days; Africa govt/tender clients historically pay with 2-4 quarter lag; credit quality generally sound but slow	B
Inventory quality	129 inventory days; suppositories have longer shelf life (24-36 months); acceptable for the dosage form	B+
Tax rate consistency	28-30% consistently (FY23-FY26); FY22 57% was a one-off; no deferred tax games visible	A
Debt trajectory	Borrowings: Rs.102 Cr (FY23) -> Rs.22 Cr (FY26); strong deleveraging	A
Dividend consistency	Annual dividend maintained 6-8% payout; not generous but reliable	B
Related party / governance	No material RPT concerns flagged by screener.in; pending Anupam acquisition introduces new RPT risk post-completion	B+
ESOP dilution	267,250 shares issued Jun-2026 — <0.25% dilution; immaterial	A
Acquisition accounting risk	Open offer at Rs.299 vs CMP Rs.438 creates goodwill/negative goodwill complexity post-consolidation	C+

- Overall earnings quality: B+ for operating results. Key concern is Rs. 71 Cr Other Income in FY26A — stripping this out yields a core PAT of approximately Rs. 85-90 Cr, placing the normalised P/E closer to 51x — materially higher than the headline 35.5x. Investors should look through to FY27E-FY28E operating earnings recovery.
- CFO conversion trend (29% FY23 -> 85% FY26) is the strongest signal of improving working capital discipline. This is the most significant quality improvement in the past 3 years.

Section 8: Valuation

Methodology

- Primary method: P/E multiple on FY28E normalised EPS. Given the acquisition noise in FY26A (elevated other income) and FY27E (normalisation dip), we anchor valuation to FY28E.
- Cross-check: EV/EBITDA on FY28E EBITDA. At Rs. 530 target, EV/EBITDA of ~22x is a 15-20% discount to Ajanta (27x) — appropriate given lower ROE.
- We exclude the open-offer price (Rs. 299) from our target price framework as it represents the block deal floor, not fair value for minority holders retaining equity.

Scenario Analysis

Scenario	Description	FY28E EPS (Rs.)	Target PE	Target Price (Rs.)	Upside vs. CMP
Bull Case	Africa revenues +20% pa; debtor days fall to 175; Anupam capex boost	15.50	38x	590	+35%
Base Case	Africa revenues +13% pa; debtor days stable 200; gradual OPM recovery to 19%	12.66	42x	530	+21%
Bear Case	Africa forex shock / Nigeria Naira devaluation; debtor days spike to 250+	8.50	30x	255	-42%

- Base case 42x FY28E PE may appear elevated vs. the 27-35x peer range. Justification: acquisition premium for the new controlling shareholder (Anupam Rasayan) who paid Rs. 299/share for 43% — implying they value strategic control, not just reported earnings. Post-integration, vertical integration synergies could compress COGS by 3-5%, lifting normalised PAT to Rs. 155-165 Cr in FY29E, making FY29E PE look 28-30x at current prices.
- Bear case risk: If Nigerian Naira or Kenyan Shilling depreciates 20%+ against INR and African tender collections slow, PAT could fall to Rs. 85 Cr range — putting fair value at Rs. 255-280, well below CMP of Rs. 438.

Section 9: Key Risks

- **Africa forex & receivables risk (HIGH):** Over 60% of revenue from Sub-Saharan Africa. Nigerian Naira has devalued 70%+ since 2023; Kenyan Shilling under IMF program pressure. Reported INR revenues may not translate to equivalent cash if debtor collections worsen. FY22 PAT collapse (Rs. 23 Cr, 57% tax rate) partly traced to African forex provisioning.
- **Open offer arbitrage selldown (MEDIUM-HIGH):** Open offer at Rs. 299 vs. CMP Rs. 438 means retail holders will NOT tender. But FII selling (from 16.5% Jun-2023 -> 10.5% Mar-2026) shows institutional exit during the run-up. Further FII selling post-offer could pressure stock.
- **Normalised other income risk (MEDIUM):** FY26A Rs. 71 Cr Other Income (53% of EBIT) masks weaker core operating performance. FY27E normalisation to Rs. 20 Cr will show reported PAT declining 11% YoY — which consensus may misinterpret as deterioration.
- **Post-acquisition integration risk (MEDIUM):** Anupam Rasayan is a B2B specialty chemicals company with no prior pharmaceutical formulations or Africa distribution experience. Integration complexity = high; board reconstitution may disrupt operational continuity in FY27.
- **Regulatory / WHO-GMP re-certification risk (MEDIUM):** Palghar WHO-GMP compliance reconfirmed June 2026 — but Africa tenders require annual certification. Any facility audit failure would immediately cost tender contracts (multi-year recovery timelines).
- **Working capital trap (LOW-MEDIUM):** CCC at 244 days has been stable-to-worsening for 5+ years. If debtor days deteriorate further to 220+ (possible if African government clients delay payments post-election cycles), FCF could turn negative and require working capital financing.
- **Liquidity risk (LOW):** With Anupam acquiring 70%+ post open offer, free float will shrink significantly (from 65% to ~30% or less). Liquidity in the stock could compress, widening bid-ask spreads for institutional investors.

Section 10: Recommendation

RATING: BUY | Target: Rs. 530 | CMP: Rs. 438 | Upside: 21% | Horizon: 12 Months

Rationale

- BLISSGVS offers a unique combination of: (a) strongest balance sheet in a decade (near-zero debt), (b) FY26A earnings beat (PAT +50% YoY), (c) acquisition-driven ownership clarification (Anupam Rasayan's full-chain pharma strategy), and (d) Kenya healthcare contract adding a high-value revenue stream beyond traditional pharma exports.
- The stock has already re-rated sharply (+270% from 52W low of Rs. 118) — the easy money is made. However, fundamental improvement in ROCE from 12% -> 17%+ is REAL, and the base case Rs. 530 target represents a reasonable 12-month return for investors comfortable with the Africa forex risk.

Entry Zone

- Preferred entry: Rs. 410-440 (current CMP zone)
- Accumulate on dips to Rs. 380-400 if post-offer free float selldown occurs
- Avoid adding above Rs. 480 until FY27 concall (Oct 2026) confirms normalised earnings trajectory

Three Invalidation Triggers

- **Trigger 1 — FY27Q1 PAT below Rs. 18 Cr:** Would signal continued other income normalisation combined with cost inflation — revise to HOLD and cut target to Rs. 350.
- **Trigger 2 — Debtor days exceed 230 in FY27Q1/Q2 results:** Would signal Africa collection deterioration — move to SELL; bear case Rs. 255 comes into play.
- **Trigger 3 — Anupam Rasayan open offer fails SEBI review / acquisition collapses:** Strategic re-rating thesis is broken. Stock likely de-rates to Rs. 280-300 (pre-announcement fundamental value).

Appendix: Latest Management Commentary & Concall Brief

CALL GRADE: B+ (No formal concall transcript available for FY26 results; assessment based on BSE announcements and open offer disclosures as of 14-Jun-2026)

To My Boss (1-Para Summary)

Bliss GVS Pharma printed its best PAT in a decade (Rs. 135 Cr, FY26A) driven by Africa contract momentum and a Rs. 71 Cr other income item (Kenya contract milestone). Simultaneously, Anupam Rasayan announced a Rs. 1,370 Cr SPA for 43.3% stake at Rs. 299/share (well below CMP Rs. 438) triggering a mandatory 26% open offer (Jul 16-29, 2026). The company is near-debt-free. Key watch for FY27: other income normalisation will optically depress PAT by 10-15%; investors should focus on operating EBITDA run-rate rather than reported PAT. We initiate BUY at Rs. 530 target (12M) — risk is Africa forex + integration execution.

Key Themes from Management Disclosures (BSE Announcements)

1. Revenue Outlook

- Africa remains core — Kenya 3-year USD 111 Mn contract provides revenue visibility through FY29
- US suppository market entry on track post US FDA Palghar approval; US launches expected FY27
- EU-GMP and WHO-GMP compliance sustained; June 2026 reconfirmation de-risks regulatory position

2. Margin Commentary

- OPM at 18% in FY26A (recovering from 16% in FY25); management guidance implied 18-20% sustainable range
- Freight cost normalisation post-FY25 spike supports gross margin recovery
- ESOP charge of ~Rs. 3-5 Cr in FY27E from June 2026 allotment — minor headwind

3. Capital Allocation

- Debt effectively eliminated — Rs. 22 Cr borrowings vs. Rs. 102 Cr in FY23
- Capex guided at Rs. 60-70 Cr in FY27 for suppository capacity expansion
- Dividend maintained; no change in payout policy flagged

4. Acquisition / Open Offer

- Anupam Rasayan SPA signed May 23, 2026 at Rs. 299/share for 43.3% stake
- Open offer for 26% at Rs. 299 opens Jul 16, closes Jul 29; settlement Aug 12
- Arora family (promoters) selling to Anupam; will retain operational roles initially
- Board reconstitution expected post-completion — timeline unclear

5. Working Capital

- Debtor days at 204 — stable vs. FY24/25; management hasn't guided improvement timeline
- Africa government clients: 3-6 month payment lags are structural (tender collection norms)
- Inventory at 129 days (suppository shelf life 24-36 months; intentional buffer)

6. Regulatory Updates

- WHO-GMP compliance for Palghar facility reconfirmed June 2, 2026 (BSE announcement)
- US FDA approval for Palghar suppository unit (legacy approval, not new)
- ESOP allotment of 267,250 shares approved by ESOP committee June 11, 2026

7. Competition

- No direct domestic competitor with identical suppository + Africa + regulated market combination
- Ajanta Pharma is closest analog on Africa branded generics but different dosage form focus
- Chinese competition largely non-WHO-GMP certified — structural moat for African tenders

8. Management Tone

- No Q4FY26 earnings call transcript publicly available (not standard practice for this company)
- BSE disclosures suggest management co-operating fully with Anupam open offer process
- No promoter pledge or distress signals; acquisition appears fully voluntary

9. FY27 Guidance

- No formal FY27 guidance issued as of 14-Jun-2026
- Analyst consensus: Revenue Rs. 1,000-1,100 Cr; PAT Rs. 100-130 Cr (wide range on other income timing)
- Our base case: Revenue Rs. 1,050 Cr, PAT Rs. 120 Cr (conservative on other income normalisation)

10. Key Risks Flagged by Management

- Africa forex volatility (no natural hedge disclosed)
- Integration complexity with Anupam post-acquisition
- US generic market launch timelines dependent on ANDA approvals (not yet filed per public disclosures)
