INVESTMENT THESIS: A world-class memory franchise at the centre of the AI/HBM supercycle — but a +1,000% melt-up has priced in the cycle peak and beyond. We rate the **stock**, not the business, a REDUCE: take profits, re-enter on the cyclical reset.

Horizon: 12 months | Report date: 03 June 2026 | Prepared by: Senior Semiconductor Analyst, Institutional Equity Research | Financials sourced from stockanalysis.com (fetched 03-Jun-2026).

2 INVESTMENT THESIS

- **Reason 1 — Memory oligopoly at peak pricing power:** Micron is one of only three global DRAM makers. FY26 has delivered records across every line; Q3 gross margin is guided to ~81% and DRAM revenue rose +207% YoY — an unprecedented profit pool while supply stays sold out through 2026.
- **Reason 2 — HBM structural growth:** High-bandwidth memory rose from <5% of DRAM revenue (2022) to >30% (2026). Micron is sold out of HBM through end-2026 at an ~\$8 Bn+ annualised run-rate and has begun HBM4 volume production for Nvidia's Vera Rubin platform.
- **Reason 3 — Cash-flow inflection:** Trailing OCF is \$30.7 Bn and FCF \$10.3 Bn; the balance sheet flipped to net cash (+\$3.8 Bn) from net debt. The franchise self-funds a >\$25 Bn FY26 capex while deleveraging.
- **Near-term catalyst (Jun 24, 2026):** Q3 FY26 results — management guided another record (\$33.5 Bn revenue, ~81% GM). A beat could extend the melt-up; any soft FY27 signal could break it.
- **Biggest structural risk:** This remains the most cyclical major industry. Peak margins plus a parabolic +1,000% run mean the **share price**, not the business, carries the risk — and HBM4 share could tilt back to SK Hynix / Samsung.

3 BUSINESS OVERVIEW

- Micron designs and manufactures memory and storage as a vertically-integrated IDM: DRAM (~76% of revenue), NAND flash (~22%) and NOR/other, sold under the Micron and Crucial brands.
- DRAM is the profit engine — 79% of Q2 FY26 revenue. Within DRAM, HBM (high-bandwidth memory for AI accelerators) is the fastest-growing line, now >30% of DRAM revenue versus <5% in 2022.
- Data-centre / cloud is now the dominant end market: cloud memory revenue rose +160% to \$7.75 Bn in Q2 FY26. Other end markets: PC, mobile, automotive and industrial.
- Key customers: AI/data-centre leaders including Nvidia (HBM for the Vera Rubin platform) and the major hyperscalers; management cites demand visibility extending through 2027.
- Revenue visibility is unusually high for a commodity business — HBM capacity is sold out through end-2026 and long-term agreements give multi-quarter price/volume visibility.
- Recent developments: closed the Tongluo (Powerchip) acquisition ahead of schedule; breaking ground on a Singapore NAND fab (output H2 CY28) and a Singapore advanced-packaging facility for HBM (CY27).

- Ownership: widely held, no promoter. Institutions own ~78%, insiders ~0.24%. CEO Sanjay Mehrotra (since 2017) is a SanDisk co-founder with deep memory pedigree.

4 INDUSTRY & COMPETITIVE LANDSCAPE

- The global memory market (DRAM + NAND) is a multi-hundred-billion-dollar industry. 2026 is a structural-undersupply 'supercycle': DRAM contract prices rose ~90-95% QoQ in Q1 2026 and a further ~58-63% in Q2 2026; NAND rose ~60-75% QoQ.
- Demand driver: top-8 hyperscaler capex is projected to exceed \$600 Bn in 2026 (+40% YoY); analysts estimate AI data centres consume ~70% of high-end DRAM — an inversion from prior cycles.
- Tailwind: AI-accelerator HBM attach plus structural DRAM-content growth. Headwind: the same capex funding today's tightness funds tomorrow's glut — the cycle has not been repealed.
- **Moat assessment:** Scale — **Strong** (3-player DRAM oligopoly); Technology/IP — **Strong** (leading-edge nodes, HBM3E/HBM4); Pricing power — **Strong now / Weak through-cycle** (price-taker on commodity bits); Switching costs — **Moderate** (multi-quarter qualification).
- HBM competitive map: SK Hynix leads at ~62% share, Micron ~21% (has overtaken Samsung), Samsung ~17%. HBM4 is the next battleground — a key Micron-specific risk (some analysts model Micron's Nvidia Rubin HBM share near zero).

Listed peer comparison — storage / memory complex (stockanalysis.com, 03-Jun-2026)

Company	CMP \$	MCap	P/E	P/B	ROCE%	TTM Rev	OPM%	Fwd P/E
Micron (MU)	1,079.57	\$1.20T	50.06	16.57	32.3	\$58.1B	48.3	11.25
Western Digital (WDC)	594.11	\$204.8B	30.84	20.07	34.3	\$11.8B	30.3	36.21
Seagate (STX)	940.69	\$212.8B	87.76	nm	58.6	\$11.0B	28.2	38.73
SanDisk (SNDK)	1,831.50	\$271.2B	61.65	18.44	40.5	\$13.2B	40.7	11.30

STX P/B = nm (Seagate's book equity is distorted by years of buybacks). All figures as reported; ROCE/OPM on a trailing basis. Note the whole complex is parabolic — WDC +1,074%, STX +830%, SNDK +4,516% over 12 months — a sector-wide AI-memory mania, not a Micron-specific re-rating.

5 MANAGEMENT QUALITY & CAPITAL ALLOCATION

- CEO Sanjay Mehrotra (since 2017) co-founded and ran SanDisk — now ironically a listed peer. CFO Mark Murphy. The team navigated the brutal FY23 trough (a \$5.8 Bn loss) into the FY26 peak with strong operational execution.
- Capital allocation is capex-first: FY26 capex >\$25 Bn (HBM/DRAM), with FY27 stepping up (construction capex +\$10 Bn YoY). The CFO frames the spend as demand-driven, with customer visibility through 2027 and beyond.
- FCF deployment: the balance sheet was protected through the downturn; with FCF now positive (\$10.3 Bn TTM) the company is deleveraging (net cash positive) and reinvesting for growth.
- Dividend: a token \$0.60/yr (~0.06% yield), payout ratio ~2% — reinvestment is the clear priority. Buybacks are paused during the heavy capex phase.
- Governance: clean — widely held, no promoter or pledge, long auditor tenure (PwC), no material related-party transactions; standard for a US large-cap.
- Watch-point: the FY27 capex step-up is the classic cyclical trap — committing peak-cycle capital that arrives as new supply just when the cycle is most likely to turn.

6 FINANCIAL DEEP-DIVE

Income Statement (\$ millions; FY ends late Aug/early Sep). FY26E/FY27E are our estimates.

\$ M	FY2023	FY2024	FY2025	FY2026E	FY2027E
Revenue	15,540	25,111	37,378	109,000	110,000
Operating Income	(5,745)	1,304	9,770	55,000	50,000
Operating Margin %	-36.97	5.19	26.14	~50	~45
EBITDA	2,011	9,084	18,122	66,000	60,000
Net Income	(5,833)	778	8,539	52,000	46,000
Diluted EPS (\$)	(5.34)	0.70	7.59	46.0	41.0

FY26E is grounded in H1 FY26 actuals (~\$37.4 Bn revenue) + company Q3 guidance (\$33.5 Bn) + a Q4 ramp. **Crux of our call:** street consensus models FY27E EPS near \$90+ (a further doubling). We model FY27 as a peak *plateau* with early margin normalisation as HBM4/DDR5 capacity ramps — this divergence is the entire debate.

Balance Sheet (\$ millions)

\$ M	FY2023	FY2024	FY2025	TTM (Feb'26)
Cash & ST Investments	9,594	8,106	10,307	14,589
Total Current Assets	21,244	24,372	28,841	41,413
Net PP&E	38,594	40,394	47,326	52,092
Total Assets	64,254	69,416	82,798	101,509
Total Debt	13,933	14,007	15,278	10,798
Total Liabilities	20,134	24,285	28,633	29,050
Shareholders' Equity	44,120	45,131	54,165	72,459
Net Cash / (Debt)	(4,339)	(5,901)	(4,971)	3,791
Book Value / Share (\$)	40.37	40.37	48.15	64.69

Cash Flow (\$ millions)

\$ M	FY2023	FY2024	FY2025	TTM (Feb'26)
Operating Cash Flow	1,559	8,507	17,525	30,653
Capital Expenditure	(7,676)	(8,386)	(15,857)	(20,372)
Free Cash Flow	(6,117)	121	1,668	10,281
Investing Cash Flow	(6,191)	(8,309)	(14,087)	(17,906)
Financing Cash Flow	4,983	(1,842)	(850)	(6,436)

Returns & Quality Ratios (% , except ratios)

Metric	FY2023	FY2024	FY2025	Current
Return on Equity (ROE)	-12.41	1.77	17.18	39.82
Return on Capital (ROCE)	-9.72	2.18	14.86	32.26
Return on Inv. Capital (ROIC)	-11.67	1.58	14.77	37.40
Gross Margin	-9.11	22.35	39.79	58.44
Inventory Turnover (x)	2.25	2.26	2.61	2.80
Current Ratio (x)	4.46	2.64	2.52	2.90
Debt / Equity (x)	0.32	0.31	0.28	0.15

- **Revenue drivers:** the FY23 trough (-49% revenue, a \$5.8 Bn loss) gave way to an AI-led V-recovery; TTM revenue of \$58.1 Bn is +85% YoY, and quarterly revenue has gone parabolic (~\$10 Bn → \$23.9 Bn Q2 → \$33.5 Bn Q3 guide).
- **Margins:** operating margin swung from -37% (FY23) to 48% (TTM) and gross margin is guided to ~81% in Q3 — historically unprecedented and, by definition, mean-reverting through the cycle.
- **Working capital:** receivables jumped to \$17.3 Bn (TTM) from \$9.3 Bn (FY25) tracking the revenue surge — a build to watch as a reversal indicator; inventory is flat-to-down with turns improving (2.6→2.8x).

- **Leverage:** total debt fell to \$10.8 Bn and the company is net cash (+\$3.8 Bn); D/E down to 0.15x and interest coverage ~80x — balance-sheet risk is low.
- **FCF quality:** OCF/PAT conversion is strong, but capex intensity is rising fast (\$20.4 Bn TTM); FCF is positive but capped by the build-out — the FY27 capex step-up is the key call on through-cycle FCF.

7 EARNINGS QUALITY CHECKLIST

Check	Rating	Signal
Revenue recognition	GREEN	Standard product sales; no channel-stuffing or bill-and-hold flags.
Receivables vs revenue	AMBER	A/R +166% YoY tracks the revenue surge; DSO build is a peak-cycle reversal risk.
Inventory / turns trend	GREEN	Inventory flat-to-down (\$8.3 Bn); turns improving 2.6 → 2.8x.
Contingent liabilities	GREEN	No material disclosed litigation overhang.
Auditor tenure / opinion	GREEN	PwC, long tenure, clean (unqualified) opinions.
Related-party txns	GREEN	Negligible; widely held, no promoter.
Other income % of PBT	GREEN	Non-operating income immaterial; earnings are operations-driven.
Tax-rate consistency	AMBER	Effective tax 13.8% TTM vs 36% FY24 vs -3% FY23 — cyclical loss/credit volatility.

- **Headline earnings quality is high** — profits are operating-driven, the balance sheet is clean, governance is unremarkable, and there are no accounting red flags.
- **Amber — receivables:** the \$17.3 Bn A/R balance (up 166% YoY) is normal at a demand peak but is the single best early-warning gauge; a sharp DSO rise would signal demand pull-forward or channel stress.
- **Amber — tax rate:** the effective rate is volatile across the cycle (cyclical losses, credits); model a normalised ~15% rate rather than any single-year figure.
- **Net:** the *numbers* are trustworthy. The risk is not accounting — it is that these are unrepeatably peak-cycle numbers being capitalised at a peak-cycle price.

8 VALUATION

Scenario analysis — valued on normalised through-cycle EPS power (the correct lens for a deep cyclical at peak).

Scenario	Key assumptions	Norm EPS	Tgt P/E	12M Tgt	vs CMP	Prob
Bull	Supercycle extends to 2028; HBM4 design-wins hold; pricing firm.	\$95	15x	\$1,450	+34%	25%
Base	FY26 is the peak plateau; 2027 pricing decelerates; multiple compresses.	\$57	13x	\$735	-32%	45%
Bear	Memory rolls over in 2027 (new capacity + HBM4 ASP cuts); margin reset.	\$33	12x	\$400	-63%	30%

Probability-weighted fair value = \$815 (~24% from CMP). 44-analyst consensus target is \$739 (~31%) — i.e. the stock trades ~47% ABOVE the average bull's target. Target range across the street: HSBC \$330 (low) to Susquehanna \$1,750 (high).

- **DCF:** at a 16.1% WACC (beta 2.17) and high-but-decaying cyclical cash flows normalising to mid-cycle, intrinsic value lands near **\$720/share**. The high WACC is the math punishing a volatile, capital-intensive cyclical.
- **Earnings multiple:** normalised through-cycle EPS of ~\$55-60 at a peak-discipline 13x (cyclicals deserve LOW multiples on PEAK earnings) implies **~\$735/share**.
- **Blended base-case 12-month target: \$735** — the average of the two methods, in line with street consensus.
- **Implied move: -31.9% from CMP of \$1,079.57** over a 12-month horizon. The 'cheap' 11x forward P/E is the classic cycle-peak illusion: peak EPS × low multiple flatters value precisely when earnings are most at risk.

9 KEY RISKS

- **Memory-cycle rollover** — DRAM/NAND is the most cyclical major industry; new HBM4/DDR5 capacity + yield gains can flip undersupply to glut. Prob: H | Impact: H | Monitor: DRAM contract price MoM (TrendForce/DRAMeXchange).
- **Valuation / technical reset** — +1,000% in 12 months, RSI 82, price 3x above its 200-DMA and ~47% above consensus target; acute mean-reversion risk. Prob: H | Impact: H | Monitor: price vs 50/200-DMA, RSI.
- **HBM4 competitive loss** — SK Hynix holds ~62% share; some analysts model Micron's Nvidia Vera Rubin HBM allocation near zero. Prob: M | Impact: H | Monitor: Nvidia HBM4 qualification news, Micron HBM-share commentary.

- **Capex overreach** — FY26 capex >\$25 Bn and FY27 stepping up >\$10 Bn; if demand softens, fixed-cost deleverage is brutal (see FY23). Prob: M | Impact: H | Monitor: capex vs OCF, fab utilisation.
- **Hyperscaler-capex concentration** — demand leans on ~8 hyperscalers (>\$600 Bn capex); any AI-capex pause hits memory first and hardest. Prob: M | Impact: H | Monitor: hyperscaler capex guidance.
- **Geopolitics / China supply** — export controls, China memory (CXMT/YMTC) ramp, and Taiwan/Singapore footprint exposure. Prob: M | Impact: M | Monitor: export-control headlines, CXMT DDR5 output.
- **Margin normalisation** — an ~81% gross margin is unprecedented and unsustainable through-cycle; reversion compresses earnings fast. Prob: H | Impact: M | Monitor: quarterly gross-margin guidance.

10 RECOMMENDATION

- **Rating: REDUCE** (High conviction). This is a call on the *price*, not the franchise — the business is excellent; the entry point is not.
- **12-month price target: \$735** (–31.9% from CMP of \$1,079.57).
- **Suggested re-entry zone: \$480-\$620** — wait for the cyclical reset toward the 50-DMA (~\$596) and an unwind of the melt-up.
- **Investment horizon: 12 months.**
- **Thesis-invalidation triggers (each would force an upgrade):**
 - 1. DRAM contract prices keep rising QoQ through CY2026 with no deceleration (supercycle longer than modelled).
 - 2. Micron secures a confirmed HBM4 design-win on Nvidia Vera Rubin at >25% allocation.
 - 3. FY27 consensus EPS is revised sustainably above \$90 and the stock holds its 50-DMA.
- **Ideal investor profile:** NOT for new buyers at these levels. Suited to (a) existing holders trimming into strength and (b) momentum traders with tight stops. Long-term investors should wait for the cyclical pullback — the franchise will still be here.

APPENDIX — Latest Concall Brief: Q2 FY2026

Reported 18 March 2026 | CEO Sanjay Mehrotra, CFO Mark Murphy | Next print: Q3 FY26 on 24 June 2026

CALL GRADE: STRONGLY POSITIVE

Signal	Status	Implication
Result quality	Strong	Beat: \$23.86 Bn rev vs \$20.07 Bn est; adj EPS \$12.20 vs \$9.31 est.
Management tone	Bullish	Records across all BUs; 'memory is now a strategic asset'.
Guidance delta	Raised	Q3 guide \$33.5 Bn rev, ~81% gross margin — another record.

STRONGLY POSITIVE | POSITIVE | NEUTRAL | CAUTIOUS | NEGATIVE

TO MY BOSS

Q2 was a clean, no-asterisk blow-out: \$23.86 Bn revenue (+196% YoY) and \$12.20 adjusted EPS, both well ahead of the street, with records in revenue, gross margin, EPS and FCF — no one-time item is flattering the print. Underlying operations are firing: DRAM revenue +207% YoY at 79% of mix, cloud memory +160% to \$7.75 Bn, and gross margin marching to a guided ~81% in Q3. The multi-bagger engine is HBM — from <5% of DRAM revenue in 2022 to >30% in 2026, sold out through end-2026, with HBM4 already in volume production for Nvidia's Vera Rubin. The near-term catalyst is the 24 June Q3 print, guided to another record (\$33.5 Bn). The single biggest watch-point is HBM4 share: SK Hynix sits at ~62% and at least one credible shop models Micron's Rubin allocation near zero — lose that socket and the FY27 bull case cracks. Here is the hard part: the business deserves an A, but the stock is up ~1,000% in a year and trades ~47% ABOVE the average analyst target. My call is on the price, not the franchise — **REDUCE / take profits above \$1,000; re-accumulate on the cyclical reset toward \$480-\$620.**

CONCALL 1 FINANCIAL PERFORMANCE SNAPSHOT

- Revenue: \$23.86 Bn | YoY +196% | QoQ +75% | **Beat** (vs \$20.07 Bn est).
- EBITDA margin / Gross margin: record; non-GAAP gross margin guided to ~81% for Q3 | **Beat**.
- Adjusted EPS: \$12.20 | vs \$9.31 est | **Beat**.
- DRAM revenue: \$18.8 Bn | +207% YoY | 79% of total revenue.
- FCF: record quarterly free cash flow; balance sheet net-cash positive.

CONCALL 2 SEGMENT / GEOGRAPHY BREAKDOWN

- DRAM: \$18.8 Bn | +207% YoY | 79% of revenue | HBM >30% of DRAM revenue.
- Cloud / data-centre memory: \$7.75 Bn | +160% | now the dominant demand driver.
- NAND: record revenue on tight supply and +60-75% QoQ pricing.
- End markets: data-centre leads; PC/mobile/auto/industrial benefiting from broad price inflation.

CONCALL 3 MANAGEMENT COMMENTARY THEMES

- AI memory as strategic asset: 'memory has become a strategic asset for customers.' Our read: pricing leverage is structural for now. Tag: GUIDANCE. Tone: Transparent.
- Supply discipline: structural undersupply + Micron execution drove the beat. Our read: oligopoly behaving rationally. Tag: EST. Tone: Transparent.
- Demand visibility: customers give requirements 'through 2027 and beyond' (CFO). Our read: genuine but capex-correlated. Tag: GUIDANCE. Tone: Transparent.
- Capex is demand-driven not speculative (CFO Murphy). Our read: the right message; the risk is it always sounds this way at the top. Tag: GUIDANCE. Tone: Hedged.

CONCALL 4 OPERATING & BUSINESS METRICS

- HBM run-rate: ~\$8 Bn+ annualised | sold out through end-2026 | Trend: improving.

- HBM4: volume production started (fiscal Q1) for Nvidia Vera Rubin; HBM4e ramps 2027 | Trend: improving.
- Gross margin: Q2 record → Q3 guide ~81% | Q(n-4) far lower | Trend: improving (cyclically).
- Capex: FY26 >\$25 Bn; Q3 ~\$7 Bn | Trend: rising sharply.

CONCALL 5 MARGIN DRIVERS

- DRAM/NAND contract pricing: large positive bps | Recurring: No (cyclical) | the dominant driver.
- HBM mix shift: positive bps | Recurring: partly | richer ASP/bit than commodity DRAM.
- Cost-down / node migration: positive bps | Recurring: Yes | structural efficiency.
- NOTE: do NOT extrapolate ~81% gross margin into forward estimates — it is a peak-cycle, non-recurring level.

CONCALL 6 GUIDANCE & FORWARD SIGNALS

- Q3 revenue [GUIDANCE]: New = \$33.5 Bn ±\$0.75 Bn | Delta = raised | Credibility: High.
- Q3 gross margin [GUIDANCE]: New = ~81% | Delta = raised | Credibility: High.
- FY26 capex [GUIDANCE]: New = >\$25 Bn | Delta = raised | Credibility: High.
- FY27 capex [GUIDANCE]: construction capex +\$10 Bn YoY | Delta = raised | Credibility: Medium (demand-dependent).

CONCALL 7 CAPITAL ALLOCATION

- Capex: FY26 >\$25 Bn | vs prior year: sharply higher | HBM/DRAM-led.
- Dividends: ~\$0.60/yr maintained | token return | growth-reinvestment priority.
- Buybacks: paused during heavy capex | minimal.
- Net debt: moved to net cash (+\$3.8 Bn) | strong deleveraging from FCF.
- Expansion: Tongluo (Powerchip) closed early; Singapore NAND fab (H2 CY28); Singapore HBM packaging (CY27).

CONCALL 8 Q&A HEAT MAP

- On HBM4 / Nvidia Rubin share: Q: will Micron hold its socket? → A: confident, sampling at up to 11 Gbps | Tone: Hedged (no explicit allocation %).
- On capex discipline: Q: is the step-up speculative? → A: demand-driven, customer visibility through 2027+ | Tone: Transparent.
- On pricing durability: Q: how long does tightness last? → A: structural undersupply, sold out 2026 | Tone: Transparent.
- Dodged / watch-list for next quarter: explicit HBM4 Rubin allocation %, and any FY27 pricing-deceleration signal.

CONCALL 9 RISKS FLAGGED

- Cyclical reversal: capacity ramps eventually pressure pricing | Flagged by: analysts | Prob: H | Impact: H | Timeline: medium.
- HBM4 competition: share could tilt to SK Hynix/Samsung | Flagged by: analysts | Prob: M | Impact: H | Timeline: near-medium.
- Capex execution: fab/package build-out risk | Flagged by: mgmt | Prob: M | Impact: M | Timeline: medium-long.
- Geopolitics / China supply: export controls + CXMT ramp | Flagged by: analysts | Prob: M | Impact: M | Timeline: medium.

CONCALL 10 ANALYST VERDICT

- Revenue visibility: Intact — HBM sold out 2026, customer visibility through 2027.

- Margin trajectory: Intact near-term / at-risk through-cycle — ~81% GM is a peak, not a baseline.
- Capital allocation quality: Intact — disciplined, demand-led, deleveraging; watch the FY27 step-up.
- Competitive moat: Intact but contested — 3-player DRAM oligopoly; HBM4 share is the swing factor.
- Management credibility: Intact — strong execution from FY23 trough to FY26 peak.
- Valuation comfort: Broken — +1,000% run, ~47% above consensus target, peak earnings capitalised at a peak price.
- Conviction call: Unchanged on the business; REDUCE on the stock — take profits, re-enter on the reset.
- Valuation snapshot: P/E = 50.1 (fwd 11.3) | EV/EBITDA = 32.8 | ROCE = 32.3% | the call is price, not quality.
