

EQUITY RESEARCH | SPECIALTY CHEMICALS | NSE: BALAMINES

Balaji Amines Ltd

India's Largest Aliphatic Amine Manufacturer — Recovery Cycle in Play

CMP	Market Cap	52W High/Low	Rating	Target
Rs. 2,120	Rs. 6,868 Cr	Rs. 2,262 / 905	BUY	Rs. 2,600
NSE: BALAMINES	Shares: ~324L	Face Value: Rs. 2	12-Month	+23% Upside

Trough-to-recovery play: BALAMINES hit a multi-year earnings floor in FY25 (PAT Rs. 159 Cr, OPM 17%) after the FY22-23 super-cycle deflated. FY26 Q4 marked the clearest turn — EBITDA margin snapped back to 24%, PAT Rs. 65 Cr (+62% YoY). Three new plants (DME 100K MT, NMM 5K TPA, ACN) commissioning FY27 create a step-change in revenue mix, while zero debt and strong CFO give balance sheet optionality. We initiate with BUY, 12M target Rs. 2,600 (29x FY27E EPS Rs. 89.75).

Metric	FY23	FY24	FY25	FY26E	FY27E
Revenue (Rs. Cr)	2,346	1,631	1,389	1,454	1,750
EBITDA (Rs. Cr)	609	324	232	312	420
OPM %	26%	20%	17%	21%	24%
PAT (Rs. Cr)	406	232	159	213	291
EPS (Rs.)	100.5	63.2	48.6	65.7	89.8
P/E (x)	—	—	—	32.3x	23.6x
ROCE %	36%	17%	11%	13%	17%

Equity Research | MPM Capital | 15 June 2026 | For professional investors only. See disclaimer on final page.

Section 1 — Business Overview & Competitive Position

Balaji Amines Ltd (BALAMINES) is India's largest and most integrated aliphatic amines producer, operating from its flagship manufacturing complex in Solapur, Maharashtra. The company commands a near-monopoly in several niche specialty chemicals and has steadily expanded from commodity methylamines into higher-margin specialty derivatives.

Key Business Pillars

- **Methylamines (core):** Capacity expanded from 48,000 TPA to 88,000 TPA — sole large-scale domestic producer; serves agrochemicals (glyphosate, mancozeb), pharma (metformin, ranitidine), and water treatment.
- **Ethylamines:** Critical inputs for rubber chemicals, dyes, and resins; strong domestic pricing power.
- **Specialty derivatives (Balaji Specialty Chemicals — BSCL subsidiary):** Morpholine, DMF, DEF, DMSO — higher EBITDA margin (25-35%) than parent; FY25 capex focus.
- **Pharma excipients:** NMP, DMA — growing share as domestic formulation demand rises.

End-Market Exposure

- Agrochemicals (~30%): Glyphosate, Mancozeb, Atrazine intermediates — seasonal but stable demand.
- Pharmaceuticals (~25%): Metformin (anti-diabetic), antihistamines, vitamins synthesis — secular growth.
- Rubber chemicals (~15%): Accelerators CBS, MBTS — driven by auto-tyre volumes.
- Water treatment / solvents (~15%): Morpholine, NMP — industrialisation tailwind.
- Exports (~15%): US, Europe, SE Asia — primarily specialty derivatives; provides natural hedge.

Competitive Moat

- Backward integration into ammonia derivatives gives 400-500bps cost advantage over import-dependent peers.
- Sole domestic producer of DMF (dimethyl fumarate), DMAPA, and several morpholine derivatives — pricing power.
- 30+ year Solapur plant has Rs. 1,000+ Cr of sunk fixed assets; greenfield replication cost prohibitive.
- Zero-debt balance sheet (FY25: borrowings Rs. 11 Cr on assets Rs. 2,252 Cr) provides M&A; / capex optionality.
- BSCL subsidiary creates a listed-company-within-company optionality as scale grows.

Section 2 — Financial Performance (FY21-FY27E)

The FY22-23 super-cycle (ethanol-linked demand surge + post-COVID restocking) pushed revenue to Rs. 2,346 Cr and EBITDA to Rs. 609 Cr. The subsequent normalisation was severe: FY25 revenue fell 41% from peak, PAT dropped 61%, and OPM compressed to 17%. However, the Q4FY26 inflection (OPM 24%, PAT Rs. 65 Cr) confirms the trough is behind us.

Annual P&L; Summary (Rs. Cr, Consolidated)

Year	Revenue	EBITDA	OPM%	Dep.	Int.	PBT	Tax%	PAT	EPS
FY21	1,308	373	29%	34	18	327	25%	243	73.5
FY22	2,314	623	27%	42	17	578	28%	418	113.7
FY23	2,346	609	26%	46	12	567	28%	406	100.5
FY24	1,631	324	20%	45	6	302	23%	232	63.2
FY25A	1,389	232	17%	48	4	213	26%	159	48.6
FY26E	1,454	312	21%	55	6	284	25%	213	65.7
FY27E	1,750	420	24%	60	8	388	25%	291	89.8

Quarterly P&L; — FY26 Recovery Trajectory (Rs. Cr)

Quarter	Revenue	EBITDA	OPM%	PAT	EPS (Rs.)	YoY PAT%
Q1FY26 (Jun-25)	358	55	15%	37	11.73	+7%
Q2FY26 (Sep-25)	341	60	18%	37	10.67	+14%
Q3FY26 (Dec-25)	331	57	17%	31	9.70	-20%
Q4FY26 (Mar-26)	395	94	24%	65	19.51	+62%
FY26 Full Year	1,425	266	19%	170	52.4	+7%

Key Financial Observations

- FY23 was the earnings peak (EPS Rs. 100.5); FY25 was the trough (EPS Rs. 48.6) — a 52% decline driven by amine price deflation, agrochemical destocking, and Chinese competition in global amines markets.
- Q4FY26 margin recovery to 24% OPM confirms pricing stabilisation; management guided 10-15% volume growth for FY27.
- Other income (Rs. 33 Cr in FY25) is material — reflects treasury yield on net-cash position; provides earnings cushion.
- Cash conversion is excellent: FY25 CFO/Operating Profit = 128%; FCF Rs. 70 Cr despite capex of Rs. 197 Cr.
- Tax rate stabilised at 25-26% (new manufacturing regime); no step-ups expected.

Section 3 — Balance Sheet & Capital Allocation

Item (Rs. Cr)	FY21	FY22	FY23	FY24	FY25
Equity Capital	6	6	6	6	6
Reserves	888	1,243	1,548	1,715	1,839
Net Worth	894	1,249	1,554	1,721	1,845
Borrowings	127	101	58	20	11
Fixed Assets (Gross)	543	681	780	896	1,003
CWIP	173	141	113	205	238
Total Assets	1,310	1,745	1,963	2,146	2,252
D/E Ratio	0.14x	0.08x	0.04x	0.01x	0.01x
Book Value (Rs.)	276	386	480	531	570

Capital Allocation Commentary

- The balance sheet has been de-leveraged from Rs. 260 Cr borrowings (FY20) to Rs. 11 Cr (FY25) — essentially a zero-debt company, providing maximum financial flexibility for the FY27 capex cycle.
- CWIP of Rs. 238 Cr (FY25) represents DME plant (~Rs. 300 Cr total project) and NMM/ACN facilities — these will capitalise in FY27, adding ~Rs. 75 Cr annual depreciation but generating Rs. 200-300 Cr incremental revenue.
- Book value grew from Rs. 276 (FY21) to Rs. 570 (FY25) = 20% CAGR; current P/B of 3.5x at CMP Rs. 2,120.
- Dividend payout has risen from 5% (FY22 super-cycle) to 23% (FY25) — management returning cash as capex moderates.
- BSCL (subsidiary) capex programme of Rs. 750 Cr (HCN, NaCN, EDTA) is phased — no balance sheet stress expected.

Section 4 — Cash Flow Analysis

Item (Rs. Cr)	FY21	FY22	FY23	FY24	FY25
Cash from Operations (CFO)	110	220	354	334	255

Item (Rs. Cr)	FY21	FY22	FY23	FY24	FY25
Cash from Investing (CFI)	-62	-147	-210	-274	-139
Cash from Financing (CFF)	-37	-57	-81	-75	-49
Net Cash Flow	11	16	63	-15	68
Free Cash Flow	-21	72	234	82	70
CFO / EBITDA	29%	35%	58%	103%	110%

Cash Flow Observations

- FY23-24 saw exceptional CFO (Rs. 354/334 Cr) driven by working capital release as inventory normalised from the FY22 super-cycle stockpiling phase. CFO/EBITDA above 100% is a high-quality signal.
- FY21 FCF was negative (-Rs. 21 Cr) due to heavy methylamines expansion capex — capacity added then generated FY22-23 peak returns (ROCE 36-49%).
- FY25 FCF of Rs. 70 Cr despite Rs. 197 Cr gross capex (DME plant) is a testament to the model's capital efficiency. Management targets minimal external borrowing for FY27 capex cycle.
- Cash Conversion Cycle has stretched from 104 days (FY21) to 168 days (FY25) — inventory build for new product launches. Watch for normalisation as DME ramps.

Section 5 — Valuation & Return Profile

We use a blended P/E + EV/EBITDA framework, anchored to FY27E when new capacity fully contributes. The stock has re-rated sharply (+128% in 3 months off the Rs. 905 low) but still trades at a discount to peers on normalised earnings.

Metric	FY25A	FY26E	FY27E	Comment
EPS (Rs.)	48.6	65.7	89.8	29% CAGR FY25-27E
P/E at CMP (x)	43.6x	32.3x	23.6x	De-rating as earnings recover
EBITDA (Rs. Cr)	232	312	420	34% CAGR recovery
EV/EBITDA (x)	29.4x	21.9x	16.2x	Attractive vs. peers at 25-35x
P/BV (x)	3.7x	3.3x	2.8x	BV growing steadily
Div. Yield	0.50%	0.52%	0.65%	Rs. 11 final div recommended FY26
ROCE %	11%	13%	17%	Mean-reversion toward 20%+ target

Peer Valuation Comparison

Company	MCap (Cr)	CMP	P/E (TTM)	ROCE %	ROE %	52W H/L
BALAMINES	6,868	2,120	41.0x	11.0%	8.75%	2262/905
Alkyl Amines (ALKYLAMINE)	9,283	1,815	49.0x	41.3%	41.4%	2449/1212
Vinati Organics (VINATORGA)	13,891	1,340	31.3x	19.8%	14.9%	2040/1203
NOCIL Ltd (NOCIL)	~4,000	~320	~28x	~18%	~14%	~360/250

Valuation Summary

- Base Case — BUY, 12M Target Rs. 2,600 (FY27E P/E 29x): Assumes OPM recovery to 24%, DME plant at 35% utilisation adding ~Rs. 80 Cr revenue, and amine volumes +12%.
- Bull Case — Rs. 3,200 (FY27E P/E 36x): China amine export restrictions drive domestic pricing power; DME at 50% utilisation; BSCL gains traction. Stock re-rates to Alkyl Amines multiple.

- Bear Case — Rs. 1,600 (FY27E P/E 18x): Global amine oversupply persists; DME delayed; agrochemical demand remains weak through FY27. EBITDA stalls at Rs. 280-300 Cr.
- The risk-reward is asymmetric: at CMP Rs. 2,120, bull/base/bear = +51%/+23%/-25%.
- BALAMINES trades at a ROCE discount to Alkyl Amines (11% vs. 41%) — justified at trough but will compress sharply as capital deployed in DME/MMM generates first-year returns in FY27.

Section 6 — Growth Catalysts & Expansion Pipeline

Near-Term Catalysts (6-12 Months)

- **DME Plant Commissioning (Q1 FY27):** 100,000 MT capacity dimethyl ether plant at Unit-IV commissioned May 2026. DME is a clean LPG alternative for aerosol, industrial, and commercial use — addressable market Rs. 500+ Cr. Initial run-rate: 30-40% utilisation = Rs. 80-110 Cr incremental revenue. No competition domestically at scale.
- **N-Methyl Morpholine (NMM) 5,000 TPA:** High-value specialty (Rs. 200/kg+ realisation) used in agrochemical synthesis and rust-inhibitor coatings. Full year contribution from FY28 — but initial revenues from Q2FY27.
- **Acetonitrile (ACN) Plant (Q2 FY27):** Improved-process ACN targets import substitution; India imports ~15,000 MT/year. Captive advantage — feeds BSCL's specialty chemicals pipeline.
- **Methylamines Volume Recovery:** Global amines destocking cycle appears to have bottomed (Q3FY26 trough). Management guided 10-15% consolidated volume growth in FY27 — historically conservative guidance.

Medium-Term Catalysts (12-36 Months)

- **BSCL Expansion (Rs. 750 Cr, Phased):** HCN (Hydrogen Cyanide), NaCN (Sodium Cyanide), EDTA — high-margin specialty inorganic/organic chemicals with diverse industrial applications. Each product targets import substitution of Rs. 300-500 Cr annually.
- **Agrochemical Capex Cycle (FY27-29):** India's agrochemical sector targeted to reach USD 12.6 Bn. BALAMINES is the primary supplier of amine intermediates (glyphosate, mancozeb, atrazine) — a 1% market share gain adds Rs. 100-150 Cr top-line.
- **Pharma API Localisation:** PLI Scheme for APIs boosts domestic formulation — metformin, antihistamines, vitamins synthesis all use BALAMINES amines. Captive growth secured.
- **Export Diversification:** China+1 strategy driving European/US chemical multinationals to qualify Indian suppliers. BALAMINES already exporting specialty derivatives — export revenue could scale 20% CAGR.

Capacity Additions — Summary

Product	Capacity	Status	Est. Revenue (Rs. Cr)	Timeline
Dimethyl Ether (DME)	100,000 MT/yr	Commissioned May 2026	80-150 (ramp)	FY27 partial
N-Methyl Morpholine (NMM)	5,000 TPA	FY27 commissioning	50-80	Q2 FY27
Acetonitrile (ACN)	TBD	FY27 commissioning	40-70	Q2 FY27
Methylamines Expansion	88,000 TPA (done)	Operational	Incremental vol.	In use
BSCL: HCN/NaCN/EDTA	Phased	Rs. 750 Cr capex	300-500 (FY28+)	FY28-29

Section 7 — Risk Factors & Mitigants

Risk	Severity	Probability	Mitigant
Chinese amine oversupply / dumping	HIGH	MEDIUM	Anti-dumping duties on glycine/DMF; BALAMINES has cost + proximity advantage in India
DME ramp slower than expected	MEDIUM	MEDIUM	Domestic LPG infrastructure transition is a multi-year story; aerosol market is near-term offtake
Agrochemical demand weakness	MEDIUM	LOW-MED	Diversified end-markets (pharma 25%, rubber 15%); seasonal patterns manageable

Risk	Severity	Probability	Mitigant
Working capital stretch (CCC 168 days)	LOW	LOW	Zero debt; Rs. 1,839 Cr reserves; can self-fund Rs. 300-400 Cr additional WC without stress
Raw material (ammonia/ethanol) inflation	MEDIUM	MEDIUM	Partial pass-through via product pricing; captive ammonia derivatives give partial hedge
Regulatory / environmental compliance	LOW	LOW	30-year operating record; ISO certified; no material non-compliance history
Execution risk — multiple plants FY27	MEDIUM	MEDIUM	Experienced management team; in-house engineering; phased commissioning reduces single-point risk
Concentration in Solapur (single site)	MEDIUM	LOW	BSCL subsidiary at separate location; insurance cover adequate; no major disruption history

Section 8 — Management Quality & Governance

Management Track Record

- **Promoter family:** The Arora family (founder-led) holds 53.71% — unchanged for 6+ quarters; zero pledge. High promoter skin-in-the-game aligns with minority shareholders.
- **Capital allocation discipline:** Debt reduced from Rs. 260 Cr (FY20) to Rs. 11 Cr (FY25) even during the heavy capex cycle — demonstrates financial discipline uncommon in Indian specialty chemicals.
- **R&D; and process innovation:** Improved-process ACN plant is an in-house development; NMM synthesis is proprietary. Captive IP moat supports long-term pricing power.
- **Dividend track record:** Consistently paid dividends since inception; payout ratio rising from 5% (FY22) to 23% (FY25) and Rs. 11/share final dividend recommended for FY26.

Institutional Confidence

- FII holding increased from 4.55% (Jun-23) to 5.16% (Dec-24) — quiet accumulation during earnings trough.
- DII holding rose from 0.18% (Jun-23) to 1.66% (Dec-24) — domestic institutional funds buying the dip.
- Public/retail holding declining (41.6% to 39.5%) — supply absorbed by institutions; positive ownership mix shift.
- No material related-party transactions or subsidiary restructuring red flags in recent filings.

Shareholding Pattern (Dec-2024)

Category	Jun-23	Dec-23	Jun-24	Dec-24	Trend
Promoters	53.71%	53.71%	53.71%	53.71%	Stable / No Pledge
FIIs	4.55%	4.58%	5.05%	5.16%	Accumulating
DIIIs	0.18%	1.43%	1.59%	1.66%	Strong buy
Public	41.57%	40.31%	39.67%	39.46%	Declining (supply)

Section 9 — Operating Efficiency & Key Ratios

Metric	FY21	FY22	FY23	FY24	FY25
Debtor Days	85	93	59	71	72
Inventory Days	64	66	89	116	128
Payable Days	44	54	18	31	32
Cash Conversion Cycle (Days)	104	105	129	156	168
ROCE %	35%	49%	36%	17%	11%
ROE %	30%	38%	28%	14%	8.75%

Metric	FY21	FY22	FY23	FY24	FY25
Asset Turnover (x)	1.12	1.52	1.28	0.80	0.64
CFO / EBITDA	29%	35%	58%	103%	110%
Dividend Payout %	5%	5%	10%	17%	23%

Efficiency Commentary

- ROCE compression from 49% (FY22) to 11% (FY25) mirrors the earnings cycle — the capital base grew (new capacity added Rs. 460 Cr FA) but revenue didn't follow. As utilisation climbs in FY27, ROCE should recover toward 17-20% — the company's pre-cycle norm.
- Inventory build-up (128 days, FY25 vs. 64 days, FY22) reflects new product launches — not a red flag, but deserves monitoring. Expect normalisation to 90-100 days by FY27.
- CFO/EBITDA consistently >100% in FY24-25 means the P&L; is not just an accounting construct — cash is actually being generated. This is the hallmark of a high-quality chemical franchise.
- Asset turnover recovery from 0.64x (FY25) to an expected 0.80-0.90x (FY27) as DME/MMM revenues kick in on a fixed asset base that barely changes — operating leverage is significant.

Appendix — Q4 FY26 Earnings Call Brief (May 2026)

Call Grade: A- | Q4 Beat + DME commissioning confirmed + FY27 volume guidance issued.

To My Boss — Q4 FY26: BALAMINES delivered its cleanest quarter in 6 periods — OPM 24%, PAT Rs. 65 Cr, the DME plant finally in commercial production, and management guiding 10-15% volume growth for FY27. The trough is confirmed. Three new plants commission in FY27; ROCE should mean-revert from 11% toward 17-20%. Initiate BUY, target Rs. 2,600.

1. Opening Remarks

- Management opened by declaring Q4 FY26 as the strongest quarter since Q3 FY23, with revenue Rs. 395 Cr and EBITDA margin recovering to 24%.
- Full-year FY26 PAT (actuals) came in at Rs. 169 Cr (our estimate Rs. 170 Cr) — in-line with our published numbers.
- The DME plant at Unit-IV achieved commercial production on 20 May 2026 — a landmark after 3+ years of construction; 100,000 MT/year nameplate capacity.
- Management tone was notably more confident vs. the cautious tone in Q2/Q3 FY26 concalls.

2. Revenue and Volume

- Q4 revenue growth of 12% YoY to Rs. 395 Cr was driven by both volume and price improvement in methylamines.
- Methylamines destocking cycle appears to have bottomed globally; domestic agrochemical demand recovering.
- Management guided 10-15% consolidated volume growth for FY27 — historically management has been conservative; street has 12% baked in.
- Export revenue was approximately 15% of sales; management targets 20% exports within 2 years via specialty derivative sales to Europe and US.

3. Margins and Cost Structure

- OPM expanded to 24% in Q4FY26 from 17% in Q4FY25 — driven by better amine realisations and product mix improvement.
- Raw material costs (ammonia, ethylene oxide) were broadly stable; no major inflation concern flagged for Q1 FY27.
- Full-year FY26 OPM was 19% vs. FY25's 17% — the trough-to-recovery trajectory is evident quarter-on-quarter.
- Management declined to give a specific OPM target but indicated 22-25% is sustainable as new products contribute.

4. New Products — DME Focus

- DME: Expecting 30-40% utilisation in first year (FY27); aerosol propellant demand is immediate and contracted.
- Industrial DME as LPG replacement in commercial kitchens and small industries is medium-term (2-3 year) ramp.
- No external borrowing required for DME — fully funded from internal accruals and existing cash.
- NMM (5,000 TPA): Commissioning targeted Q2 FY27; offtake discussions with European specialty chemical buyers ongoing.
- ACN (Acetonitrile, improved process): Q2 FY27 commissioning — 100% import substitution play; current import price Rs. 180-220/kg.

5. Balance Sheet and Capital Allocation

- Company is effectively debt-free (Rs. 11 Cr outstanding); no plans for large external borrowings for FY27 capex.
- Board recommended final dividend of Rs. 11/share for FY26 (payout ~23%) — continued commitment to shareholder returns.

- CWIP of Rs. 238 Cr (FY25) will largely capitalise in H1 FY27 as DME, NMM, ACN plants commission.
- BSCL (subsidiary) Rs. 750 Cr expansion is phased — Phase 1 (HCN) to begin FY27-28; no parent-level guarantee required.

6. Competitive Landscape

- Chinese amine exports remain a pricing headwind in global markets but domestic India pricing is holding — MoC has received anti-dumping representations.
- BALAMINES remains the sole domestic producer of DMF and several morpholine derivatives — no near-term competitive threat.
- Alkyl Amines (peer) expanding too but in different sub-segments (trimethylamine, choline chloride); no direct overlap in core methylamines.

7. Agrochemical and Pharma Demand

- Agrochemical sector demand recovering; glyphosate and mancozeb formulator inventory restocking visible from Q4 FY26.
- Pharma demand (metformin, antihistamines) is secular — grew even in FY25 downturn; management expects 8-10% volume growth here.
- PLI scheme for APIs creates structural demand tailwind for amine intermediates — 3-5 year visibility.

8. Guidance and Outlook

- Revenue guidance FY27: Rs. 1,650-1,800 Cr (our estimate Rs. 1,750 Cr — in the range).
- Management expects EBITDA margins to be in the 22-25% range for FY27 as new products kick in.
- Target to reach Rs. 2,000-3,000 Cr revenue within 2 fiscal years — implies FY28/FY29 CAGR of 15-20%.
- No major equity dilution planned; growth will be funded by internal accruals and modest working capital lines.

9. Q&A; Highlights

- Q: When will DME be cash-flow positive? A: Management expects DME to be EBITDA positive within 12 months; payback 6-7 years at 50% utilisation.
- Q: Competition risk from China in DME? A: DME logistics (compressed gas) make import-substitution natural; China DME is consumed domestically.
- Q: BSCL subsidiary listing? A: No immediate plans; will evaluate when scale justifies independent listing.
- Q: Methylamines capacity utilisation? A: 65-70% in Q4 FY26; expects to reach 80%+ by H2 FY27 on volume recovery.
- Q: Working capital normalisation? A: Inventory build for new product launches; CCC should come down to 130-140 days by FY27-end.

10. Our Assessment & Key Debates

- **Bull case debate:** If DME hits 50% utilisation and amine prices recover 10%, FY27E EPS could reach Rs. 100+ — implying CMP is only 21x normalised earnings. Deep value.
- **Bear case debate:** Chinese overcapacity in aliphatic amines is structural, not cyclical. If pricing stays suppressed, FY27 revenue could disappoint at Rs. 1,550-1,600 Cr.
- **Our view:** The DME commissioning removes the primary 'promise without delivery' overhang. FY27 is a capex payback year — we prefer to be long into this rather than wait for confirmation.
- **Key data point to watch:** Q1 FY27 (Jun-26) results — if DME revenue appears in standalone financials and OPM stays above 22%, the recovery thesis is intact.
